

Drag reduction from different of shark denticles

Gökçe Atacan and Dwarka Akash Tejveer

Abstract Each chapter should be preceded by an abstract (no more than 200 words) that summarizes the content.

1 Introduction

Introduce your project! You can perhaps include what led you to choose this topic, or why you chose this certain project idea instead of other similar ideas.

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations. And please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

2 Related Work and Background

Use this section to go over any research papers you found useful in your project, or any papers that are relevant to your project topic.

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations. And please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

This is how you [1] articles.

3 Data and Methodologies

Please include a brief intro for your process of gathering data, which methods you used, and/or why you chose these datasets and methods.

3.1 Data Collection

This subsection is for describing your data collection. The different parts can be separated by types of data (spreadsheets? satellite images?) or categories of data (economic data? historical data?) , or however seems fit for your project.

Please do not use quotation marks when quoting texts! Simply use the `quotation` environment – it will automatically be rendered in line with the preferred layout.

3.1.1 Data Collection Section 1

Feel free to use images, tables, etc.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

3.1.2 Data Collection Section 2

Include any additional images, tables, data etc.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

3.2 Methods

Please describe the methods you used in this subsection. This can include: what platforms did you use? what coding languages? did you use AI? what AI model? Did you use any libraries? etc. Also, we only added two subsections but feel free to add more. 2.

Please do not use quotation marks when quoting texts! Simply use the `quotation` environment – it will automatically be rendered in line with the preferred layout.

Fig. 1 Figures should always have a caption.

3.2.1 Method Subsection 1

Again, feel free to add any images, tables, etc. Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations as has already been described in Sect. 3.1, see also Fig. 1¹

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

¹ If you copy text passages, figures, or tables from other works, you must obtain *permission* from the copyright holder (usually the original publisher). Please enclose the signed permission with the manuscript. The sources must be acknowledged either in the captions, as footnotes or in a separate section of the book.

3.2.2 Method Subsection 2

Again, feel free to add any images, tables, etc. Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations as has already been described in Sect. 2.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

4 Results

Provide a description of main findings in chronological order of the data represented in the methods section. Include a summary of research findings. Repeat questions to help readers understand results. Additionally, include a report about information collection, participants, and recruitment.

Show data presented in tables, charts, graphs, and other figures.

4.0.1 Subsubsection Heading

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations as has already been described in Sect. 2.

5 Conclusion

Please use this section to describe the applications of your findings. Can this be used in other fields? What are some concerns or problems with your results? What are the next steps, if you plan to continue the project after the summer? etc. Again, we added two subsections but feel free to add more.

5.1 Applications

In order to avoid simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Use the $\LaTeX$ automatism for all your cross-references and citations as has already been described in Sect. 2.

Please note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

5.2 Concerns and Next Steps

Instead of simply listing headings of different levels we recommend to let every heading be followed by at least a short passage of text. Further on please use the $\LaTeX$ automatism for all your cross-references and citations as has already been described in Sect. 2.

Note that the first line of text that follows a heading is not indented, whereas the first lines of all subsequent paragraphs are.

Acknowledgements If you want to include acknowledgments of assistance and the like at the end of an individual chapter please use the `acknowledgement` environment – it will automatically be rendered in line with the preferred layout.
